51
52
53
54
55 if _name_ == '__main__':
56
       main()
```

Bitmask explanation

```
Consider we have 0x0201:
       0x0201 = 0000 0010 0000 0001 < - Binary representation
       bitwise and
       0000 0010 0000 0001
       0000 \ 0000 \ 0000 \ 0001 = 0 \times 0001
       bitwise and
       0000 \ 0010 \ 0000 \ 0000 = 0 \times 0200
       Doing a right shift by 8 bits we isolate the second 2 bytes.
       0 \times 0200 >> 8 = 0000 \ 0010 \ 0000 \ 0000 = 0000 \ 00010 = 0 \times 02
right shift
```

Thank you!
